

## Easy Connect – InControl Remote Control Products

### Intelliconn Noke Lock Setup and Usage

#### UNBOXING

The packaging for the **1036 – Noke Bluetooth Lock** is unique. With the proper steps, it removes easily without destruction. A YouTube video is available to guide you through unboxing.

<https://www.youtube.com/watch?v=26cJH1xqfFU>

Remove the front clear cover. Turn over the box and peel back the label tab from the top edge, to lift the back cover hinged on the bottom edge. Remove the instruction sheet and set aside. Pull out the plastic tab inside the shackle. This frees the other two tabs to be squeezed together and pushed through the packaging. This will free the lock on the front.

Proceed to app setup.

#### OTHER PRODUCTS

If you have a Noke Lock, consider adding a Fob, to enable someone to access the lock without using a smartphone.

#### **1039 – Noke Bluetooth Key Fob**

Works like the fob for your car door locks.

Also available Summer 2017, **1041- Noke U-Lock**. Available for pre-order. Comes with a bike mount.

Lock not included

Need to extend the reach of your lock solution? Try a **1037 – Noke Cable Kit**

Pole-mounted bracket included for storing the lock and cable when not in use. Lock sold separately.

## APP SETUP

INSTALL

Manage your Nokē smart-locks and eliminate the hassle of keys and combos forever

READ MORE

Download the Noke app from the App Store or from Google Play.

Enable Bluetooth in your mobile device, create an account and follow the instructions in the app and in the printed guide, to add and setup your lock. Set up 1-step or 2-step access, and a quick click code.

Enable others to gain access to the lock one time, or on a schedule. View the lock access log.

## LOCK OPERATION

Lock may be setup for 1-step unlock or 2-step unlock for greater security. 2-step requires an action in the app to complete the unlock process.

Please note that to save power in the lock or your phone, Bluetooth goes to sleep after a few minutes of no action. To consistently open the lock, “wake” the Bluetooth in your phone by opening the app, then wake the lock by applying a short firm press on the shackle. Apply another short firm press to trigger it to verify with the phone. If 2-step is enabled, after pressing the shackle, “tap to unlock” in the app to finish the unlock sequence.

If using a paired fob, wake the lock, then squeeze the center of the fob to trigger the lock to open. Wait for an audible click and a green light on the lock, then pull up on the shackle.
